Kumta, Karnataka - 581332

OBJECTIVE

Backend Developer skilled in Node.js, Express.js, and MongoDB, with experience building and integrating RESTful APIs. Familiar with AI-based workflows and debugging real-world system issues. Strong foundation in data structures, OOP, and scalable backend development.

KEY SKILLS :

- **Programming Languages:** Java (OOP), JavaScript (ES6+), Python
- **Frontend Basics:** HTML5, CSS3, JavaScript (API integration & testing)
- **Backend Development**: Node.js, Express.js, RESTful APIs, Middleware, JWT Authentication
- **API & Integration:** REST API integration, third-party services (AI APIs, Cloudinary), handling API failures and response validation
- **Database Management:** MongoDB, MySQL (CRUD, JOINs), Mongoose, Database Design
- **Cloud & Deployment**: Microsoft Azure (App Services, deployment, environment configuration)
- **Version Control:** Git (branching, pull requests, merge conflict resolution)
- **AI-Assisted Development:** Cursor, Claude Code (API development, debugging, automation)

EDUCATION

Dr. A.V Baliga College, Kumta (Karnataka University-Dharwad) **2026**
Bachelor of computer application Karnataka

GOVT H BENNE PU COLLEGE, NELLIKERI KUMTA – 12th **2023**
Karnataka School Examination and Assessment Board Karnataka

INTERNSHIP

Web Developer Intern - Sash Info Services Pvt Ltd **Project Link**

- Enhanced a document-based AI chatbot by improving backend processing and query handling workflows
- Optimized the RAG retrieval pipeline (chunk size, top_k, similarity thresholds) to improve response accuracy
- Implemented prompt control logic, fallback mechanisms, and response validation to handle incorrect or missing data
- Developed web crawling functionality to extract and process external data for dynamic knowledge updates
- Tested and validated chatbot responses across edge cases, semantic queries, and failure scenarios
- Debugged integration issues between backend services and AI models to ensure reliable system behavior
- Used Git with branch-based workflows for efficient code management and collaboration

PROJECTS

AI Mock Interview Platform | Node.js, Express.js, MongoDB, Generative AI **Project Link**

- Built a backend-driven AI mock interview platform that simulates technical interviews and generates automated feedback.
- Developed scalable RESTful APIs using Node.js and Express.js for managing interview sessions, transcripts, and feedback.
- Integrated Generative AI to process user responses and generate structured performance insights.
- Implemented secure JWT authentication with HTTP-only cookies and protected routes for session and user management.
- Designed efficient data storage using MongoDB for handling interview data, user records, and transcripts.

Hospital Management System (Medi-Flow) | Node.js, Express.js, MongoDB **Project Link**

- Developed a role-based hospital management system to manage doctors, patients, and appointments.
- Designed and implemented RESTful APIs using Node.js and Express.js with MongoDB for scalable data handling.
- Integrated Cloudinary for secure image upload and storage management.
- Implemented form validation, centralized error handling, and optimized API performance.
- Structured backend logic for role-based access control and efficient data flow between system modules.
