Kumta, Karnataka - 581332

OBJECTIVE

Backend-focused developer skilled in Node.js, Express.js, and MongoDB, with experience building RESTful APIs and AI-powered applications using RAG and web crawling. Strong foundation in data structures, OOP, and system design, with familiarity in HTML, CSS, JavaScript, and Azure deployment.

KEY SKILLS :

- **Programming Languages:** JavaScript (ES6+), Python
- **Backend Development:** Node.js, Express.js, RESTful APIs, Middleware, JWT Authentication
- **API & Integration:** REST API integration, third-party services (AI APIs, Cloudinary), error handling & response validation.
- **Database Management:** MongoDB, Mongoose, Database Design, CRUD Operations
- **Cloud & Deployment:** Microsoft Azure (App Services, Storage, Basic Deployment), Environment Configuration.
- **AI / ML:** RAG, Prompt Engineering, Web Crawling
- **Tools & Technologies:** Git, GitHub, Postman, VS Code, Antigravity, Chrome DevTools, Cursor, Claude Code

EDUCATION

Dr. A.V Baliga College, Kumta (Karnataka University-Dharwad) **2026**
Bachelor of computer application Karnataka

GOVT H BENNE PU COLLEGE, NELLIKERI KUMTA – 12th **2023**
Karnataka School Examination and Assessment Board Karnataka

INTERNSHIP

Web Developer Intern - Sash Info Services Pvt Ltd **Project Link**

- Contributed to improving a document-based AI chatbot for the **Indian Institute of Foreign Languages,** handling queries from institutional documents.
- Optimized the RAG retrieval pipeline by tuning chunk size, top_k retrieval, and similarity thresholds to enhance response relevance.
- Implemented prompt control logic and fallback mechanisms to ensure responses were strictly grounded in document context.
- Integrated web crawling to fetch and process external data, improving the chatbot's ability to handle dynamic queries.

AI Intern – FRIHBI Enterprises Pvt Ltd

- Contributed to backend development of a live POS (Point of Sale) system, improving transaction workflows in a production environment.
- Implemented and optimized GST and tax calculation logic for billing, reporting, and financial records.
- Enhanced checkout, discount, and payment processing flows to ensure reliable and error-free transactions.
- Improved data validation for employee and customer inputs, ensuring data accuracy and consistency across the system.

PROJECTS

AI Mock Interview Platform **Project Link**

- Built a backend-driven AI mock interview platform that simulates technical interviews and generates automated feedback.
- Developed scalable RESTful APIs using Node.js and Express.js for managing interview sessions, transcripts, and feedback.
- Integrated Generative AI to process user responses and generate structured performance insights.
- Implemented secure JWT authentication with HTTP-only cookies and protected routes for session and user management.
- Designed efficient data storage using MongoDB for handling interview data, user records, and transcripts.

Hospital Management System (Medi-Flow) **Project Link**

- Developed a role-based hospital management system to manage doctors, patients, and appointments.
- Designed and implemented RESTful APIs using Node.js and Express.js with MongoDB for scalable data handling.
- Integrated Cloudinary for secure image upload and storage management.
- Implemented form validation, centralized error handling, and optimized API performance.
- Structured backend logic for role-based access control and efficient data flow between system modules.
