KOUSHIK D SHET

Backend Developer — Node.js Developer

koushikshet2401@gmail.com | +91 9380439747
LinkedIn | GitHub | Portfolio
Bangalore, Karnataka

Professional Summary

Backend Developer specializing in webhook infrastructure, RAG-powered AI applications, and multi-tenant SaaS platforms using Node.js, Express.js, PostgreSQL, MySQL, Redis, and BullMQ. Built and deployed 20+ REST APIs with JWT/RBAC authentication and event-driven architecture .

Key Skills

- **Backend Development:** Node.js, Express.js, REST API Design, JWT Authentication, RBAC, Socket.IO
- **AI/RAG:** OpenAI API, pgvector, Vector Embeddings, RAG Pipelines
- **Architecture & Messaging:** Webhook Systems, MVC Architecture, Redis, BullMQ, Event-Driven Design
- **Databases:** MySQL, PostgreSQL
- **DevOps & Tools:** Docker, Git, GitHub, Postman
- **Languages:** JavaScript (ES6+)

Education

Bachelor of Computer Applications 2023 – 2026
Dr. A.V Baliga College of Arts and Science, Kumta
Karnataka University – Dharwad CGPA: 8.92 / 10

Internship

Web Developer Intern – Sash Info Services Pvt Ltd Mar 2026 – Jun 2026

- Built a production RAG-based AI chatbot for EduCtrl using Node.js, GPT-4o-mini, and pgvector, automating FAQ-level support queries with human escalation fallback.
- Diagnosed and fixed a critical production bug blocking client deployments, resolving it via runtime configuration injection from Laravel.
- Improved retrieval accuracy in the IIFLS AI assistant by re-tuning chunking strategy and adding automated web crawling for dynamic knowledge updates.

Projects

WebhookHub – Webhook Delivery Platform Project Link

- Engineered a fault-tolerant webhook delivery engine using BullMQ and Redis with exponential-backoff retries (up to 8 attempts), automatic dead-letter queues, and one-click replay.
- Implemented JWT-based RBAC, AES-256-GCM encryption at rest, dual-layer SSRF protection blocking private/cloud-metadata IPs, achieving approximately 190 requests/sec with p99 latency below 210 ms.

Technologies: Node.js, Express.js, MySQL, Prisma ORM, Redis, BullMQ, Socket.IO, JWT

KnowBridge (AI-Powered Customer Support Platform) Project Link

- Built a multi-tenant customer support platform with an embeddable React chat widget and live Socket.IO routing, intelligently resolving Level-1 queries before human escalation.
- Engineered a robust Retrieval-Augmented Generation (RAG) pipeline utilizing PostgreSQL (pgvector), custom web crawlers, and OpenAI to deliver context-aware AI responses from dynamic PDFs and URLs.

Technologies: Node.js, Express.js,PostgreSQL (pgvector), Socket.IO, OpenAI API

Certifications

- Full Stack Web Development – Skill Up, GeeksforGeeks Link
